

Communicating to you the meaning and purpose of what you do

WHY it matters

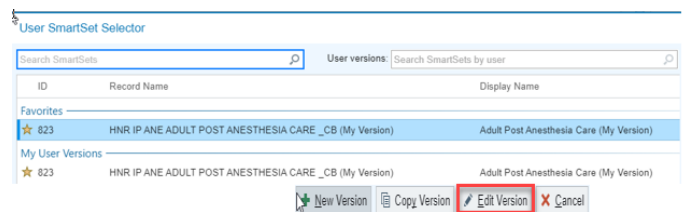

- HonorHealth has been cited by its regulatory certifying agency, DNV, for having multiple duplicate PRN orders for the same pain levels with different medications.
- To be compliant with this directive, Pain medication PRN indications will be updated to not have the same PRN indications as other PRN pain medications.
- Mandatory verbiage will be added on **April 16th** which will **REMOVE** any pre-existing saved pain medications on personalized Adult Post Anesthesia Care and OB Post Anesthesia Care order sets.
- On **April 16th**, pain management orders will need to be resaved on all personalized Adult Post Anesthesia Care and OB post Anesthesia Care order sets.
- See “How to do it” to resave pain management orders.

How to do it

- To make changes to personalized order sets, go to Personalize on your Epic Toolbar and select User SmartSets

- Select your saved order set and click Edit Version

- Select the medications you would like on your order set. When done, click Save in the upper left corner.

For questions regarding this change, please contact:

Dr. Mark Spiro at Mark.Spiro@envisionhealth.com

On or after April 16th, if you need assistance with resaving pain management orders on your personalized Post Anesthesia order sets, contact Crysta Ritter at critte@honorhealth.com
